

# Biological Soybean or Pulse

**on-farm network**  
PARTICIPATORY • PRECISE • PROACTIVE

**Can biological products boost productivity? Find out!**

## Suggested Treatments

- 1) Treated
- 2) Untreated

*Biological product selected by farmer, must have agronomic foundation for marketed claims*

## Trial Design

- Follow a randomized layout
- Minimum four replicates
- Strips need to be at least as wide as one combine pass
- Strips should run the length of the field, excluding the headlands

## Your Fields, Your Results

- Established with your equipment
- Under your management practices
- Harvested with your equipment
- MSPG support at establishment & harvest
- MSPG collects data throughout the season
- Results packaged together for you in a short report
- Must be a member in good standing

Headland

Treated	Untreated	Treated	Untreated	Untreated	Treated	Untreated	Treated	Treated	Untreated	Treated	Untreated
1	2	3	4	5	6	7	8	9	10	11	12

Headland

***Suggested treatments will be modified based on the selected product***

***Decision Making, Simplified***  
***Your trial includes:***

- ✓ Plant stand data
- ✓ In-season observations
- ✓ Yield results
- ✓ Economics analysis

***Your data, working for your farm***
