

Soybean Fungicide

on-farm network
PARTICIPATORY • PRECISE • PROACTIVE

Will a fungicide application reduce disease pressure this year? Will the decision be economic? Find out!

Suggested Treatments*

- 1) Single application
- 2) Unsprayed

**Applied according to label rates/timing*

Trial Design

- Follow a randomized layout
- Minimum four replicates
- Strips need to be at least as wide as one combine pass
- Strips should run the length of the field, excluding the headlands

Headland

Single App	Unsprayed	Single App	Unsprayed	Unsprayed	Single App	Unsprayed	Single App	Single App	Unsprayed	Single App	Unsprayed
1	2	3	4	5	6	7	8	9	10	11	12

Your Fields, Your Results

- Established with your equipment
- Under your management practices
- Harvested with your equipment
- MPSG support at establishment & harvest
- MPSG collects data throughout the season
- Results packaged together for you in a short report
- Must be a member in good standing

Decision Making, Simplified
Your trial includes:

- ✓ Plant stand data
- ✓ Disease ratings
- ✓ Yield results
- ✓ Economics analysis

Your data, working for your farm
