Soybean Biological Trial

Trial ID: 2023-SB04 – R.M. of Rosser

Objective: Quantify the agronomic and economic impacts of biological products for soybean production.

Summary: There was no significant yield difference between soybeans treated with Fertiactyl® and those without. Due to the lack of yield response, there was a decrease in profit/ac in the treated area of the trial, equivalent to the cost of product.

Trial Information †

Treatment	Fertiactyl®
Soil Texture	Clay
Previous Crop	Triticale
Tillage	Zero Till
Seeding Date	May 23
Variety	P006A37X
Seeding Rate	196 000 seeds/ac
Row Spacing	9"
Plant Stand @ V2	137 000 plants/ac
Harvest Date	September 20

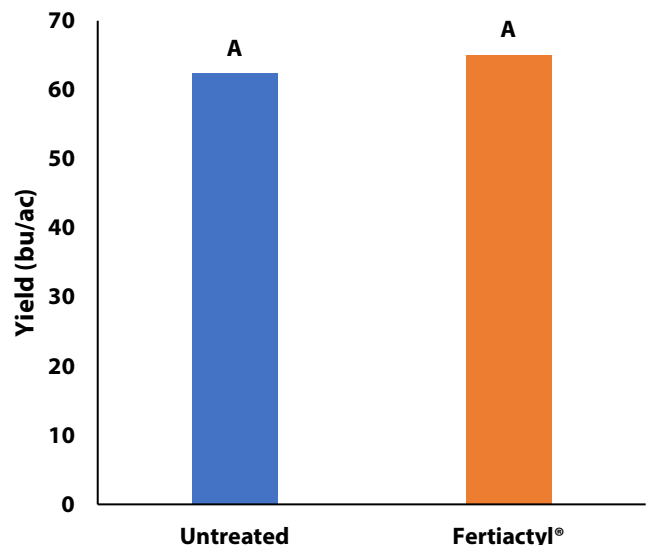

Precipitation (mm)

	May	June	July	Aug	Total
Rainfall	11.8	47.4	47	48.4	154
Normal	53.8	92	66	63.3	276
% Norm	22%	52%	70%	76%	56%

Soybean Biological Trial

Overall Yield & Economics

	Mean (bu/ac)	Cost †	Change in Profit ††
Fertiactyl®	50.7	\$28/ac	-\$28/ac
Untreated	50.5		
Yield Difference	0.2		
P-Value	0.5135		
CV	1.4%		
Significance	No	Economic	No

† Based on an estimated cost for biological products

†† Yields were not significantly different, therefore there is no increased income to offset the cost of the biological product
